

Protecting Your AV Investment

REMOTE MONITORING AND REAL-TIME ERROR DETECTION

TAKE THE HEADACHE OUT OF AV MAINTENANCE,
CONTACT UNIFIED AV TODAY!

AV with Confidence. Save time, money and frustration with Unified RM. We monitor your system and address issues before they can cause embarrassment and headaches. From an unresponsive touch panel to an interruption in internet connectivity, Unified RM monitors and cares for your AV system.

Efficient Complexity. Behind any well-designed AV System is a complicated network of programming and devices communicating with one another locally and across the internet. Typically when there is a malfunction a technician is dispatched to diagnose and make repairs; an effort that may take hours or even days.

Solution Overview. At the core of Unified RM is a remote management tool our technicians use to detect, diagnose and resolve certain problems often without the need to schedule an on-site visit. An optional annual preventive maintenance "tune-up" benefits the system's overall performance and lifespan.

Your Time Is Money. We detect and repair anomalies in your AV system minimizing demands of your time. Adjustments may be made before you even know there's an issue. Repairs requiring a site visit, are proactively scheduled. Usage reports help determine which devices are essential for future system investments.

- Skip the service line with Unified RM
- Worry-free operation of AV systems

- System health reports
- Optional Firmware updates
